

RAREDOVE on Solana: A Litepaper

Version 1.0 | February 2026

1. Our Mission: To Do Good and Help Humanity

RAREDOVE (RDOVE) is a cryptocurrency with a simple, yet profound mission: **to do good and help humanity in both large and small ways**. We are building a transparent, efficient, and accessible ecosystem for humanitarian financing on the Solana blockchain.

Our world faces two critical failures in charitable giving:

1. **The Black Box of Giving:** Donors have little to no visibility into how their funds are used, leading to a persistent trust deficit.
2. **The Months-Long Pipeline:** Traditional financial systems are slow, and it can take weeks or months for aid to reach those in need during a crisis.

RAREDOVE solves these problems by leveraging the power of blockchain for **radical transparency and instant settlement**.

2. The RAREDOVE Ecosystem

Our ecosystem consists of two interconnected platforms powered by the RDOVE utility token:

AllOfHumanity.fun: The Charity Memecoin Launchpad

AllOfHumanity.fun adapts the viral energy of memecoin trading for social good. Anyone can launch a token on our platform, but with one key difference: **every token must be tied to a verified humanitarian cause**.

- **Mandatory Charity Fee:** A percentage of every trade is automatically sent to the designated charity's wallet.
- **Transforming Speculation into Impact:** We turn a zero-sum game into a positive-sum activity where even speculative trading generates real-world humanitarian funding.
- **Frictionless Experience:** Built on Solana, the platform is fast, cheap, and accessible to anyone, with no crypto experience required.

RareGive: Enterprise-Grade Charity Operations

RareGive is a comprehensive platform for charitable organizations to move their entire financial operations on-chain.

- **Full Transparency:** Every donation and disbursement is recorded on the Solana blockchain, creating a public, auditable trail of funds.
- **Instant Disbursements:** Organizations can send funds to field operations in seconds, not months.
- **Secure Governance:** Built-in multisig functionality ensures that no single individual can unilaterally move funds, preventing fraud and mismanagement.

3. Why Solana? A Strategic Redeployment for Maximum Impact

RAREDOVE was originally conceived on Ethereum, but we made the strategic decision to redeploy on Solana to overcome a critical obstacle: **cost**.

Metric	Ethereum	Solana	Impact on RAREDOVE
Transaction Fee	\$5-\$50+	~\$0.00025	Enables micro-donations; a \$5 donation is now viable.
Transaction Speed	~15 TPS	65,000+ TPS	Massively scalable for global campaigns.
User Onboarding	Complex	Privy (Native Social Login)	Radically simpler for non-crypto users—no seed phrases needed.

Solana’s architecture allows us to build a platform that is **fast, affordable, and accessible to everyone**, which is essential for achieving our mission.

4. The RDOVE Token: Utility and Governance

The RDOVE token is the backbone of our ecosystem, providing utility and aligning incentives.

- **Governance:** RDOVE holders can vote on which charities get verified, how platform fees are used, and which campaigns receive matching funds.
- **Staking:** Staking RDOVE provides rewards and unlocks premium features and fee discounts.

- **Community Boosting:** Users can stake RDOVE to “boost” their favorite projects, increasing their visibility and impact.

Token Specifications:

- **Blockchain:** Solana
 - **Total Supply:** 1,000,000,000 (1 billion)
 - ****Standard:**SPL Token
 - **Transfer Fees:** None
-

5. A Frictionless Onboarding Experience

We are building for the 99% of people who have never used cryptocurrency. Our onboarding system is designed to be as simple as any traditional web application:

- **Privy:** Sign in with your existing Google, Facebook, or Twitch account. A secure, self-custodial Solana wallet is automatically created in the background.
 - **Gasless Transactions:** We sponsor transaction fees, so you never need to buy or hold Solana to use the platform.
 - **Fiat On-Ramps:** Donate with your credit card, and we handle the conversion to cryptocurrency seamlessly.
-

6. Our Commitment to Trust and Security

To combat fraud and ensure donor confidence, we have implemented a multi-layered verification framework:

1. **Assure DeFi KYC:** All project creators undergo mandatory, comprehensive identity verification.
 2. **AI-Powered Due Diligence:** We use AI to analyze organizations’ public data and flag potential risks.
 3. **Token Curated Registry (TCR):** The community uses RDOVE to vote on and maintain a decentralized list of trusted organizations.
-

7. Join Us in Raising the Low Boats

RAREDOVE is more than a cryptocurrency; it is a movement to build a more transparent, equitable, and effective system for humanitarian aid. By combining the power of

blockchain with a relentless focus on user experience, we can create a world where doing good is accessible to everyone.
